Reimagining Informed Consent

1. History of the doctrine of informed consent
2. Failure of the law to achieve ethical goals
3. A proposal
4. Starting to think about comprehension

Part I: What is Informed Consent?

Process of communication between a patient and physician that results in the patient's authorization or agreement to undergo a specific medical intervention

What's the Purpose of Informed Consent?

- Protect individual autonomy
- Ensure human being status (respect for persons)
- Avoid fraud/duress
- Encourage good/rational decision making
- Involve public in medicine
- Improve patient care

Informed Consent History

- Paternalism
 - Non-maleficence

Informed Consent History

- Paternalism → Autonomy
 - Non-maleficence → Self-Determination

“The historic transition from the regime of ‘doctor is right’ to ‘patient has rights’”

Sheldon F. Kurtz, *The Law of Informed Consent: From “Doctor is Right” to “Patient has Rights”*,
50 SYRACUSE L. REV. 1243 (2000)

Informed Consent History

- Paternalism → Autonomy
- Battery → Informed Consent (negligence)

POLL

Informed Consent: The Elements

1. Duty
2. Breach
3. Injury
4. Causation

Informed Consent History

- Paternalism → Autonomy
- Battery → Informed Consent (negligence)
- “Community” standard of disclosure →
“Reasonable Patient” standard of
disclosure

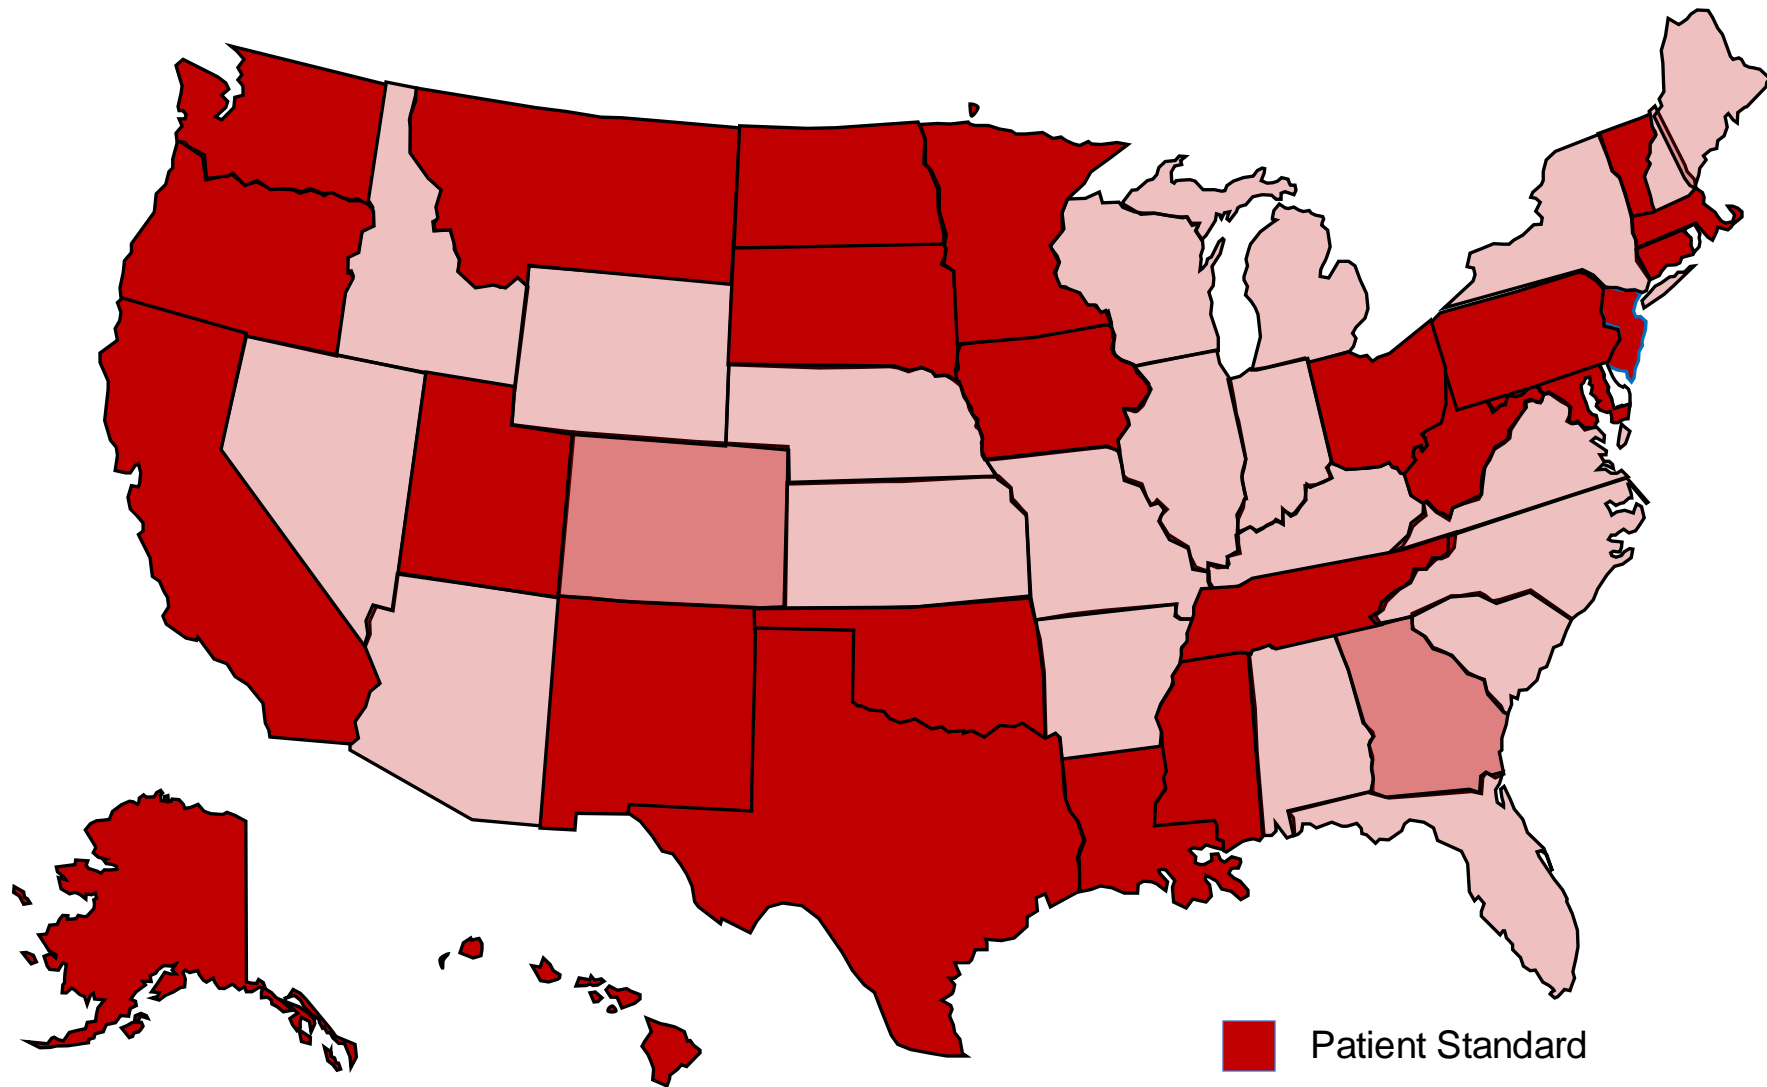

The *Canterbury* standard

- Requires disclosure of all information that is material to a reasoned decision by the patient to accept or reject the offered intervention
 - Degree and incidence of risk of intervention
 - Alternatives to intervention
 - Risks/benefits of no treatment
- Whether information is “material” determined by reasonable prudent person standard

POLL

Dueling Materiality Standards

Source: Studdert et al., *Geographic Variation in Informed Consent*
Law, 4 J. Empirical Studies 103 (2007) (updated)

- Patient Standard
- Professional Standard
- Hybrid Standard

Dueling Materiality Standards

Community standard	Reasonable patient standard
Nature and scope of proposed treatment	Risks, benefits, and alternatives material to reasonable patient
Expert testimony re appropriate disclosure pursuant to professional standards	Expert testimony re risks of intervention, incidence, possibility that intervention caused resulting harm
Physician <i>discretion</i> to disclose	Physician <i>duty</i> to disclose
Decision to accept/reject therapy is <i>medical</i> decision	Decision to accept/reject therapy is <i>personal</i> decision

The Law Continues to Emphasize (and Expand) Disclosure

- *Hidding v. Williams*, 578 So. 2d 1192 (La. 1991) (physician's alcohol use is material to patient's decision) (*but see Kaskie v. Wright*, 589 A.2d 213 (Pa. 1991))

The Law Continues to Emphasize (and Expand) Disclosure

- *Hidding v. Williams*, 578 So. 2d 1192 (La. 1991) (physician's alcohol use is material to patient's decision) (*but see Kaskie v. Wright*, 589 A.2d 213 (Pa. 1991))
- *Arato v. Avedon*, 858 P.2d 598 (Cal. 1993) (no mandated disclosure of life expectancy information)

The Law Continues to Emphasize (and Expand) Disclosure

- *Hidding v. Williams*, 578 So. 2d 1192 (La. 1991) (physician's alcohol use is material to patient's decision) (*but see Kaskie v. Wright*, 589 A.2d 213 (Pa. 1991))
- *Arato v. Avedon*, 858 P.2d 598 (Cal. 1993) (no mandated disclosure of life expectancy information)
- *Faya v. Almarez*, 620 A.2d 327 (Md. 1993) (physician HIV+ status may be material to patient's decision)

The Law Continues to Emphasize (and Expand) Disclosure

- *Hidding v. Williams*, 578 So. 2d 1192 (La. 1991) (physician's alcohol use is material to patient's decision) (*but see Kaskie v. Wright*, 589 A.2d 213 (Pa. 1991))
- *Arato v. Avedon*, 858 P.2d 598 (Cal. 1993) (no mandated disclosure of life expectancy information)
- *Faya v. Almarez*, 620 A.2d 327 (Md. 1993) (physician HIV+ status may be material to patient's decision)
- *Johnson v. Kokemoor*, 545 NW 2d 495 (Wis. 1996) (physician's inexperience may be material to a patient's decision)

Part II: The Legal Doctrine Fails Patients

- “A superficial charade rather than an autonomous choice”
(George Annas)
- “A charade, a symbolic but contentless formality”
(Alexander Capron)
- The “bete noire of the medical malpractice doctrine”
(Richard Shugrue & Kathryn Linstromberg)
- A “willing accomplice” to the subversion of informed consent
(Grant Morris)
- “Ritualistic, formalistic, and hollow” (Peter Schuck)

Part II: The Legal Doctrine Fails Patients

Part II: The Legal Doctrine Fails Patients

Canterbury Fails

All proposed solutions have focused on ***disclosures***, rather than on disclosures and ***comprehension***

POLL

The Legal Doctrine Fails Patients

Consent: 1954

I give my consent for an operation to be performed
on my *son* under general anaesthetic, and
for the Surgeon to do whatever he considers necessary.

Signed _____
Date: _____

Informed Consent: Now

INFORMED CONSENT TO SURGERY

1. Title of Form.

This form is called an "Informed Consent Form." It is your doctor's obligation to provide you with

the information you need in order to decide whether the procedure that your doctors have recommended, have received this information and have given you recommended to you, you should read this form so that you understand the operation or procedure to be consent. If you have questions, you are encouraged to ask them. Your doctors are not employees or agents of the hospital or of the medical practitioners.

2. Recommendation

Your doctors have recommended the following operation or procedure:

and the following type of anesthesia:

Upon your authorization and consent, this operation or procedure, together with any other procedure indicated due to any emergency, will be performed by the doctor named below (or, in the event of a complete the procedure, a qualified substitute doctor including anesthesiologists, pathologists, and radiologists) at the hospital or at the doctor's office. The doctor(s) performing the procedure may assign designated responsibilities.

3. Practitioner

Name of the practitioner who is performing the procedure: _____
The hospital maintains personnel and facilities to assist in various surgical operations and other special diagnostic and therapeutic procedures. The hospital or the doctor(s) performing the procedure may assign designated responsibilities.

4. Standard Risks

All operations and procedures carry the risk of serious injury, death, from both known and unforeseen causes, and you have the right to be informed of these risks.

- The nature of the operation or procedure, its risks, benefits, and alternatives.

SURGICAL & THERAPEUTIC PROCEDURE CONSENT FORM

Patient Name _____

Date _____

Dr. Frank Armstrong has discussed with you your condition and the recommended surgical procedure to be performed. This discussion was intended to ensure that you had the opportunity to receive the information necessary to make a reasoned and informed decision whether or not to consent to the procedure. This document is written confirmation of that discussion and contains some of the more significant medical information discussed.

1. Based on this discussion, I understand the following condition may exist:

2. I understand the procedure proposed for treating or diagnosing my condition is:

3. I have been informed of the purpose and reasonable expected benefits of the procedure, the risks of the procedure, the risks of not having the procedure, the risks of the procedure if the procedure is not performed, and the available alternatives. Some of the risks of the procedure (Cryosurgery, ED&C, Radiation), Surgical Excision, or MOHS surgical procedure, Granulation, Graft, or Skin Flap.

4. I understand that all surgical and therapeutic procedures involve risks, but are not limited to, the potential for infection, allergic reaction, erythema, peeling, hypopigmentation, hyperpigmentation, blistering, bleeding, bruising, hematoma, injury to nerves and/or numbness, of the lesion(s) and/or symptoms, and the need for further treatment. Risks listed above, intralesional steroid injections include, but are not limited to, tissue atrophy, striae, HPA suppression, hypertension, hyperglycemia, development of superficial blood vessels.

5. I am aware that in the practice of medicine, other unexpected risks may occur. I understand that no guarantees or promises have been made by the doctor(s) performing the procedure. Although the benefits are judged to outweigh the risks, there could be permanent. I hereby voluntarily give my authorization to perform the proposed procedure described above.

6. I consent to the administration of local anesthetics as may be considered necessary for this service. I hereby consent to the administration of medical assistants. I consent to the administration of the following:

1% Lidocaine with Epinephrine _____ Other _____

7. I hereby authorize and consent to the disposal of tissue necessary for diagnostic purposes.

8. I have been given the opportunity to ask questions about my condition, treatment, the procedure to be used, and the risks and hazards involved in giving this informed consent.

9. I UNDERSTAND THAT AN INDEPENDENT LABORATORY MAY BE PART OF ARMSTRONG DERMATOLOGY & SKIN CANCER CENTER. THE LABORATORY DIRECTLY IF YOU RECEIVE A BILL.

I certify I have read and fully understand the contents of this form, that the doctor and all blanks and statements requiring insertion or completion were filled in by the doctor(s) performing the procedure.

Patient Signature _____

If patient is a minor or unable to give consent, Signature of person authorized to consent for patient: _____

Relationship to patient: _____

1. I understand that the doctor(s) performing the procedure may assign designated responsibilities to the following personnel: anesthesiologist, pathologist, radiologist, and other medical personnel. I understand that the doctor(s) performing the procedure may assign designated responsibilities to the following personnel: anesthesiologist, pathologist, radiologist, and other medical personnel. I understand that the doctor(s) performing the procedure may assign designated responsibilities to the following personnel: anesthesiologist, pathologist, radiologist, and other medical personnel.

2. I understand that the doctor(s) performing the procedure may assign designated responsibilities to the following personnel: anesthesiologist, pathologist, radiologist, and other medical personnel. I understand that the doctor(s) performing the procedure may assign designated responsibilities to the following personnel: anesthesiologist, pathologist, radiologist, and other medical personnel.

3. I understand that the doctor(s) performing the procedure may assign designated responsibilities to the following personnel: anesthesiologist, pathologist, radiologist, and other medical personnel. I understand that the doctor(s) performing the procedure may assign designated responsibilities to the following personnel: anesthesiologist, pathologist, radiologist, and other medical personnel.

4. I understand that the doctor(s) performing the procedure may assign designated responsibilities to the following personnel: anesthesiologist, pathologist, radiologist, and other medical personnel. I understand that the doctor(s) performing the procedure may assign designated responsibilities to the following personnel: anesthesiologist, pathologist, radiologist, and other medical personnel.

5. I understand that the doctor(s) performing the procedure may assign designated responsibilities to the following personnel: anesthesiologist, pathologist, radiologist, and other medical personnel. I understand that the doctor(s) performing the procedure may assign designated responsibilities to the following personnel: anesthesiologist, pathologist, radiologist, and other medical personnel.

6. I understand that the doctor(s) performing the procedure may assign designated responsibilities to the following personnel: anesthesiologist, pathologist, radiologist, and other medical personnel. I understand that the doctor(s) performing the procedure may assign designated responsibilities to the following personnel: anesthesiologist, pathologist, radiologist, and other medical personnel.

7. I understand that the doctor(s) performing the procedure may assign designated responsibilities to the following personnel: anesthesiologist, pathologist, radiologist, and other medical personnel. I understand that the doctor(s) performing the procedure may assign designated responsibilities to the following personnel: anesthesiologist, pathologist, radiologist, and other medical personnel.

8. I understand that the doctor(s) performing the procedure may assign designated responsibilities to the following personnel: anesthesiologist, pathologist, radiologist, and other medical personnel. I understand that the doctor(s) performing the procedure may assign designated responsibilities to the following personnel: anesthesiologist, pathologist, radiologist, and other medical personnel.

9. I understand that the doctor(s) performing the procedure may assign designated responsibilities to the following personnel: anesthesiologist, pathologist, radiologist, and other medical personnel. I understand that the doctor(s) performing the procedure may assign designated responsibilities to the following personnel: anesthesiologist, pathologist, radiologist, and other medical personnel.

10. I understand that the doctor(s) performing the procedure may assign designated responsibilities to the following personnel: anesthesiologist, pathologist, radiologist, and other medical personnel. I understand that the doctor(s) performing the procedure may assign designated responsibilities to the following personnel: anesthesiologist, pathologist, radiologist, and other medical personnel.

11. I understand that the doctor(s) performing the procedure may assign designated responsibilities to the following personnel: anesthesiologist, pathologist, radiologist, and other medical personnel. I understand that the doctor(s) performing the procedure may assign designated responsibilities to the following personnel: anesthesiologist, pathologist, radiologist, and other medical personnel.

12. I understand that the doctor(s) performing the procedure may assign designated responsibilities to the following personnel: anesthesiologist, pathologist, radiologist, and other medical personnel. I understand that the doctor(s) performing the procedure may assign designated responsibilities to the following personnel: anesthesiologist, pathologist, radiologist, and other medical personnel.

13. I understand that the doctor(s) performing the procedure may assign designated responsibilities to the following personnel: anesthesiologist, pathologist, radiologist, and other medical personnel. I understand that the doctor(s) performing the procedure may assign designated responsibilities to the following personnel: anesthesiologist, pathologist, radiologist, and other medical personnel.

14. I understand that the doctor(s) performing the procedure may assign designated responsibilities to the following personnel: anesthesiologist, pathologist, radiologist, and other medical personnel. I understand that the doctor(s) performing the procedure may assign designated responsibilities to the following personnel: anesthesiologist, pathologist, radiologist, and other medical personnel.

15. I understand that the doctor(s) performing the procedure may assign designated responsibilities to the following personnel: anesthesiologist, pathologist, radiologist, and other medical personnel. I understand that the doctor(s) performing the procedure may assign designated responsibilities to the following personnel: anesthesiologist, pathologist, radiologist, and other medical personnel.

16. I understand that the doctor(s) performing the procedure may assign designated responsibilities to the following personnel: anesthesiologist, pathologist, radiologist, and other medical personnel. I understand that the doctor(s) performing the procedure may assign designated responsibilities to the following personnel: anesthesiologist, pathologist, radiologist, and other medical personnel.

17. I understand that the doctor(s) performing the procedure may assign designated responsibilities to the following personnel: anesthesiologist, pathologist, radiologist, and other medical personnel. I understand that the doctor(s) performing the procedure may assign designated responsibilities to the following personnel: anesthesiologist, pathologist, radiologist, and other medical personnel.

18. I understand that the doctor(s) performing the procedure may assign designated responsibilities to the following personnel: anesthesiologist, pathologist, radiologist, and other medical personnel. I understand that the doctor(s) performing the procedure may assign designated responsibilities to the following personnel: anesthesiologist, pathologist, radiologist, and other medical personnel.

19. I understand that the doctor(s) performing the procedure may assign designated responsibilities to the following personnel: anesthesiologist, pathologist, radiologist, and other medical personnel. I understand that the doctor(s) performing the procedure may assign designated responsibilities to the following personnel: anesthesiologist, pathologist, radiologist, and other medical personnel.

20. I understand that the doctor(s) performing the procedure may assign designated responsibilities to the following personnel: anesthesiologist, pathologist, radiologist, and other medical personnel. I understand that the doctor(s) performing the procedure may assign designated responsibilities to the following personnel: anesthesiologist, pathologist, radiologist, and other medical personnel.

21. I understand that the doctor(s) performing the procedure may assign designated responsibilities to the following personnel: anesthesiologist, pathologist, radiologist, and other medical personnel. I understand that the doctor(s) performing the procedure may assign designated responsibilities to the following personnel: anesthesiologist, pathologist, radiologist, and other medical personnel.

22. I understand that the doctor(s) performing the procedure may assign designated responsibilities to the following personnel: anesthesiologist, pathologist, radiologist, and other medical personnel. I understand that the doctor(s) performing the procedure may assign designated responsibilities to the following personnel: anesthesiologist, pathologist, radiologist, and other medical personnel.

23. I understand that the doctor(s) performing the procedure may assign designated responsibilities to the following personnel: anesthesiologist, pathologist, radiologist, and other medical personnel. I understand that the doctor(s) performing the procedure may assign designated responsibilities to the following personnel: anesthesiologist, pathologist, radiologist, and other medical personnel.

24. I understand that the doctor(s) performing the procedure may assign designated responsibilities to the following personnel: anesthesiologist, pathologist, radiologist, and other medical personnel. I understand that the doctor(s) performing the procedure may assign designated responsibilities to the following personnel: anesthesiologist, pathologist, radiologist, and other medical personnel.

25. I understand that the doctor(s) performing the procedure may assign designated responsibilities to the following personnel: anesthesiologist, pathologist, radiologist, and other medical personnel. I understand that the doctor(s) performing the procedure may assign designated responsibilities to the following personnel: anesthesiologist, pathologist, radiologist, and other medical personnel.

26. I understand that the doctor(s) performing the procedure may assign designated responsibilities to the following personnel: anesthesiologist, pathologist, radiologist, and other medical personnel. I understand that the doctor(s) performing the procedure may assign designated responsibilities to the following personnel: anesthesiologist, pathologist, radiologist, and other medical personnel.

27. I understand that the doctor(s) performing the procedure may assign designated responsibilities to the following personnel: anesthesiologist, pathologist, radiologist, and other medical personnel. I understand that the doctor(s) performing the procedure may assign designated responsibilities to the following personnel: anesthesiologist, pathologist, radiologist, and other medical personnel.

28. I understand that the doctor(s) performing the procedure may assign designated responsibilities to the following personnel: anesthesiologist, pathologist, radiologist, and other medical personnel. I understand that the doctor(s) performing the procedure may assign designated responsibilities to the following personnel: anesthesiologist, pathologist, radiologist, and other medical personnel.

29. 39. I understand that the doctor(s) performing the procedure may assign designated responsibilities to the following personnel: anesthesiologist, pathologist, radiologist, and other medical personnel. I understand that the doctor(s) performing the procedure may assign designated responsibilities to the following personnel: anesthesiologist, pathologist, radiologist, and other medical personnel.

40. I understand that the doctor(s) performing the procedure may assign designated responsibilities to the following personnel: anesthesiologist, pathologist, radiologist, and other medical personnel. I understand that the doctor(s) performing the procedure may assign designated responsibilities to the following personnel: anesthesiologist, pathologist, radiologist, and other medical personnel.

FORM 1-2

INFORMED CONSENT TO SURGERY OR SPECIAL PROCEDURE

1. This form is called an "Informed Consent Form." It is your doctor's obligation to provide you with the information you need in order to decide whether to consent to the surgery or special procedure that your doctors have recommended. The purpose of this form is to verify that you have received this information and have given your consent to the surgery or special procedure recommended to you. You should read this form carefully and ask questions of your doctors so that you understand the operation or procedure before you decide whether or not to give your consent. If you have questions, you are encouraged and expected to ask them before you sign this form. Your doctors are not employees or agents of the hospital. They are independent medical practitioners.

2. Your doctors have recommended the following operation or procedure: _____ and the following type of anesthesia: _____

Upon your authorization and consent, this operation or procedure, together with any different or further procedures which, in the opinion of the doctor(s) performing the procedure, may be indicated due to any emergency, will be performed on you. The operations or procedures will be performed by the doctor named below (or, in the event the doctor is unable to perform or complete the procedure, a qualified substitute doctor), together with associates and assistants, including anesthesiologists, pathologists, and radiologists from the medical staff of (name of hospital) _____ to whom the doctor(s) performing the procedure may assign designated responsibilities.

3. Name of the practitioner who is performing the procedure or administering the medical treatment: _____

The hospital maintains personnel and facilities to assist your doctors in their performance of various surgical operations and other special diagnostic or therapeutic procedures. However, your doctors, surgeons and the persons in attendance for the purpose of performing specialized medical services such as anesthesia, radiology, or pathology are not employees or agents of the hospital or of doctor(s) performing the procedure. They are independent medical practitioners.

4. All operations and procedures carry the risk of unsuccessful results, complications, injury or even death, from both known and unforeseen causes, and no warranty or guarantee is made as to result or cure. You have the right to be informed of:

- The nature of the operation or procedure, including other care, treatment or medications;
- Potential benefits, risks or side effects of the operation or procedure, including potential problems that might occur with the anesthesia to be used and during recuperation;
- The likelihood of achieving treatment goals;
- Reasonable alternatives and the relevant risks, benefits and side effects related to such alternatives, including the possible results of not receiving care or treatment; and

5. CMS recommends that consent forms state, if applicable, that physicians other than the operating practitioner, including but not limited to residents, will be performing important tasks related to the surgery, in accordance with the hospital's policies (and, in the case of residents, based on their skill and under the supervision of the responsible practitioner) and that qualified medical practitioners who are not physicians will perform important parts of the surgery or administration of anesthesia within their scope of practice, as determined under state law, and for which they have been granted privileges by the hospital.

Canterbury Fails

“When we focus on the law, we tend to lose sight of the ethical underpinnings for it. In trying to focus on the ‘letter of the law,’ we often lose sight of its ‘spirit.’ When law becomes pervasive, we often forget about the original ethical questions that prompted the legal resolutions”

Charity Scott, *Why Law Pervades Medicine: An Essay on Ethics in Health Care*, 14 NOTRE DAME J.L. ETHICS & PUBLIC POL’Y 245 (2000).

...the legal doctrine of informed consent does not further the ethical goals upon which it is premised

Canterbury Fails

“‘Overdisclosure’ makes it difficult for patients to distinguish meaningful risks from trivial ones.”

Robin Fretwell Wilson, *The Promise of Informed Consent*, THE OXFORD HANDBOOK OF U.S. HEALTHCARE LAW 229 (I. Glenn Cohen, Allison Hoffman, William M. Sage, & Kathleen G. Sebelius, eds. 2017)

“A significant body of research has demonstrated that the ideal of informed consent rarely matches the reality of healthcare decision making”

Megan Wright, *Resuscitating Consent*, 63 B.C. L. REV. 887, 900 (2021)

Patient Comprehension is Low

Abstract

Background:

Physicians and society may overestimate the level of patient comprehension. The purpose of this study was to prospectively measure the immediate level of patient comprehension of the informed consent process of obtaining informed consent for medical and surgical treatment. The study was to prospectively measure the immediate level of patient comprehension of the informed consent process that surgical consent is obtained and the effect of time on this level of

“Patient comprehension and recall immediately following a thorough discussion of the consent form was unexpectedly low”

Abstract

BACKGROUND

The issue of informed consent retention has not been previously addressed in dermatology literature. Several studies in other fields of medicine have shown that retention rates are below 50%.

OBJECTIVE

To determine the percentage of complications recalled at 20 minutes and at 1 week after the informed consent process.

Summary

¶ *Objective.* Informed consent (IC) is an important principle of modern medicine and the quality of the process is likely to receive increasing attention in future due to complex surgical procedures and a development of social mistrust for medical treatment. Medico-legal action is also becoming an important influence on IC, in particular the extent of warning to be given about the degree of risk. Evaluation of IC, however, encounters various problems. One key

The consent and counselling of patients for cataract surgery: a prospective audit

D Cheung¹ and S Sandramouli²

CLINICAL STUDY

Abstract

Purpose The aims of ideal preoperative informed consent include educating the patient adequately to enable an autonomous decision to be made without causing undue anxiety. We study how the paternalistic and nonpaternalistic approaches meet this ideal. The influence of the new patient consent forms is also assessed.

Methods Two cycles of a prospective clinical audit are presented. An assessment of relevant patient knowledge was performed by patient interview. Visual analogue scales were used to quantify patient anxiety.

Results The first cycle, examining a paternalistic approach, demonstrated: 37% of patients understood what a cataract was and 48% understood what surgery involved. 48% misunderstood that cataract surgery was completely risk free. In total, 80% of patients undergoing second eye surgery believed that it was completely risk-free. Average anxiety visual analogue scores (VAS) for cataract surgery were low (2.89). The second cycle, examining the nonpaternalistic approach,

surgery often have an overoptimistic view of cataract surgery.

Introduction

The concept of patient consent evolved from a judgement in the US Supreme court in 1914.¹ *Simple consent* became part of international law following the World War II Nuremberg trial of Nazi physicians,² with its basic premise that *patient agreement* is required prior to performing a procedure. The phrase ‘informed consent’ was first used in a 1957 California legal case^{3,4} and is defined as the process whereby health care providers provide the patient with the information necessary to make an *informed decision* about their care. By law, patients must consent to a procedure before it can be performed.

Predictors of Comprehension during Surgical Informed Consent

Aaron S Fink, MD, FACS, Allan V Prochazka, MD, MSc, William G Henderson, PhD, Debra Bartenfeld, RN, MSN, Carsie Nyirenda, MB, ChB, MPH, Alexandra Webb, MD, FACS, David H Berger, MD, MHCM, FACS, Kamal Itani, MD, FACS, Thomas Whitehill, MD, FACS, James Edwards, MD, FACS, Mark Wilson, MD, PhD, FACS, Cynthia Karsonovich, MD, FACS, Patricia Parmelee, PhD

BACKGROUND: Patient comprehension during surgical informed consent remains problematic. Using data from our randomized trial of methods to improve informed consent comprehension, we performed an additional analysis to define independent factors associated with improved patient understanding.

STUDY DESIGN: Patients scheduled for 1 of 4 elective operations (total hip arthroplasty [n = 137], carotid endarterectomy [n = 178], laparoscopic cholecystectomy [n = 179], or radical prostatectomy [n = 81]) at 7 Department of Veterans Affairs (VA) medical centers were enrolled. All informed consent discussions were performed using iMedConsent (Dialog Medical), the VA's computerized informed consent platform. Using a unique module within iMedConsent, we randomized patients to repeat back (RB), requiring correct reiteration of procedure-specific facts, or standard (STD) iMedConsent. Patient comprehension was tested after the informed consent discussion using procedure-specific questionnaires. Time spent completing the informed consent process was measured using time stamps within iMedConsent. Multiple linear regression identified factors independently associated with improved comprehension.

RESULTS: We enrolled 575 patients (276 RB, 299 standard); 93% were male, 74% were Caucasian, and 89% had at least a high school education. Independent factors associated with improved comprehension included race ($p < 0.01$), ethnicity ($p < 0.05$), age ($p < 0.02$), operation type ($p < 0.01$), group assignment (\pm RB; $p < 0.05$), and total consent time ($p < 0.0001$). Patient comprehension was maximized when informed consent took between 15 and 30 minutes. RB's positive impact on patient comprehension was weaker in the analysis including consent time.

CONCLUSIONS: Comprehension during informed consent discussions may be limited in individuals with potential language difficulty due to ethnicity or education. Total consent time was the strongest predictor of patient comprehension. Affording adequate time for informed consent discussions and using informed consent adjuncts such as RB may enhance comprehension in such individuals. (J Am Coll

The principle of informed consent—that patients have the right to participate in decisions about their own health care—is a widely accepted tenet of ethics and law. Yet hospitals are challenged to make informed consent understandable not only for their general patient base, but also for the more than 100 million patients with limited literacy, health literacy, or English proficiency, including recent immigrants and the elderly.

A new Commonwealth Fund-supported article, “[Reconceptualizing the Informed Consent Process at Eight Innovative Hospitals](#)” (*The Joint Commission Journal on Quality and Patient Safety*, Mar. 2008), describes the move toward a more patient-centered model of informed consent, and the obstacles encountered, at selected hospitals. “Our case study approach allows us to explore informed consent dilemmas at institutions that have given these issues a great deal of thought and attention,” say

patient consent forms. These forms serve two main purposes: to document informed consent discussions between clinicians and patients, and to protect hospitals from liability. The forms, which often contain complex medical and legal language, are typically presented to patients after speaking with their doctor, and rarely invite reflection and further discussion.

All of the hospitals in this study considered redesigning their forms. Some were concerned, however, that simplified forms would take away the opportunity for meaningful discussion with the patient and the professional. Others suggested that simplified forms could expose hospitals to litigation from patients who could not understand the forms and not informed about procedural risks.

As a result, only a few of the hospitals succeeded in simplifying their consent forms. When simplifying

Repeat-back is “one of the few interventions that has been shown to improve patient comprehension and recollection of health care information”
